GEOLOGÍA / GEOLOGY

CARACTERÍSTICAS GEOLÓGICAS EN LA ZONA DEL ESTUDIO/
GEOLOGICAL FEATURES IN THE STUDY AREA

Imagen de radar del oriente de Perú en que destacamos unas fallas geológicas y dos llanos activamente hundiéndose. Estos llanos son regiones extremadamente planas donde sedimentos están siendo depositados por los ríos grandes que drenan los Andes. La topografía fuera de los llanos está marcada por varias fallas (Dumont 1993, 1996; Latrubesse y Rancy 2000; Stallard 2006). Dos juegos de fallas son especialmente importante para este estudio: la Falla Tapiche/Falla Inversa Moa-Jaquirana (Dumont 1993; Latrubesse y Rancy 2000); y la Falla Río Blanco/Falla Inversa Bata Cruzeiro (Latrubesse y Rancy 2000; Stallard 2006). Las fallas transcurrentes podrían estar relacionadas con fallas reactivadas en el Escudo Brasileño (cf. Dumont 1993; Latrubesse y Rancy 2000). Los conos volcánicos de lava alcalina provienen de hace 4.3 a 4.9 millones de años. Esa clase de lava es generada por una placa hundiéndose de una manera muy empinada comparada con la subducción superficial típica de hoy en día (Stewart 1971; James 1978). El cambio de subducción profunda a subducción superficial debajo de los conos volcánicos hubiera cambiado de hace 3 a 4 millones de años atrás, cuando pasaba la placa Nazca por debajo de la región de Sierra del Divisor./Radar image of eastern Peru on which geological faults and two actively subsiding foreland basins are shown. The latter are extremely flat regions in which sediments are being deposited by the larger rivers that drain the Andes. Topography outside of the subsiding areas is demarcated by various faults (Dumont 1993, 1996; Latrubesse and Rancy 2000; Stallard 2006). Two sets of faults are of special interest in this study: the Tapiche Fault/Moa-Jaquirana Inverse Fault (Dumont 1993; Latrubesse and Rancy 2000); and the Río Blanco Fault/Bata Cruzeiro Inverse Fault (Latrubesse and Rancy 2000; Stallard 2006). Transcurrent faults may relate to reactivated faults in the Brazilian shield (cf. Dumont 1993; Latrubesse and Rancy 2000). The small group of volcanoes with alkalic lavas date from 4.3 to 4.9 million years ago. Such lavas are generated by a steeply dipping slab rather than the shallow-slab subduction seen today (Stewart 1971; James 1978). The change from steep to shallow subduction under the volcanoes would have been about 3 to 4 million years ago, with the passage of the Nazca Ridge under the Sierra del Divisor region.

**Plantas Vasculares/
Vascular Plants**

Especies de plantas vasculares registradas en tres sitios en la Zona Reservada Sierra del Divisor, Perú, durante el inventario biológico rápido entre el 6 y 24 de agosto del 2005. Compilación por R. Foster y N. Dávila. Miembros del equipo botánico: R. Foster, N. Dávila, I. Mesones, V. L. Uliana y C. Vriesendorp. La información presentada aquí se irá actualizando y estará disponible en la página Web en www.fieldmuseum.org/rbi.

**Anfibios y Reptiles/
Amphibians and Reptiles**

Anfibios y reptiles observados en tres sitios durante el inventario biológico rápido entre 6 y 24 de agosto del 2005 en la Zona Reservada Sierra del Divisor, Perú. La lista esta basada en el trabajo de campo de M. Barbosa de Souza y C. Rivera.

**Mamíferos Grandes/
Large Mammals**

Mamíferos registrados y potencialmente presentes en tres sitios en la Zona Reservada Sierra del Divisor, Perú. La lista está basada en el trabajo de campo entre 6 y 24 de agosto del 2005 por M.L.S.P. Jorge, P. Velazco e asistentes locales. Los nombres en inglés siguen Emmons (1997), y los nombres en castellano y Shipibo son los utilizados por las comunidades locales.

Inventarios Regionales de Mamíferos/Regional Mammal Inventories

Una comparación de inventarios de mamíferos al nivel regional. Comparamos datos del inventario de la Zona Reservada Sierra del Divisor en Perú (6 al 24 de agosto 2005) con tres inventarios previos dentro de la misma Zona Reservada y dos inventarios de bosque contiguo en Brasil, en el Parque Nacional da Serra do Divisor. Compilado por M.L.S.P. Jorge y P. Velasco.

A comparison of regional mammal inventories. We compare data from this inventory of the Zona Reservada Sierra del Divisor, Peru (6 to 24 August 2005) to three previous inventories within the same Zona Reservada and two inventories from a contiguous forest in Brazil, in the Parque Nacional da Serra do Divisor. Compiled by M.L.S.P. Jorge and P. Velasco.

**Fortalezas Sociales/
Social Assets**

Fortalezas sociales que fueron identificados durante el inventario social de nueve asentamientos humanos cercanos a la Zona Reservada Sierra del Divisor del 2 al 22 de agosto del 2005.
Compilación por A. Nogués.

| FORTALEZAS SOCIALES | | | | | |
|----------------------------|--------------|--------------------|---|--|---|
| Comunidad | Cuenca | Etnia | Fortalezas | | Visión para el futuro |
| | | | Organizacionales | Uso de Recursos | |
| Comunidad Nativa San Mateo | Río Abujao | Asheninka | Trabajo comunal en minga Organización rápida de comuneros mediante amenazas | Utilización de diversidad de recursos para autoconsumo Área titulada satisface necesidades Extracción de madera de baja escala y bajo impacto | Cuidar sus recursos de madereros y mineros que amenazan Mantener su cultura y su lengua materna Tener mayor población de plantas medicinales, frutales, y otros |
| C.N. Patria Nueva | Río Callería | Shipibo | Comité Local de Vigilancia de Pescadores (COLOVIPE) Club de Madres Capacidad de relacionarse al nivel comunal con instituciones de apoyo Biohuerto Junta de Administración Saneamiento Sanitario Colaboración con comunidades vecinas Trabajo comunal semanalmente | Reforestación de bolaina, caoba, cedro, sangre de grado, capirona Recolección sostenible de aguaje Uso sostenible de recursos del área por grupos de mujeres para elaboración de artesanías (tejidos y cerámicas) Cultivos agrícolas de baja escala | Ser vecinos de un área protegida Ser el “primer puesto de vigilancia” Tener más posibilidades de mejorar su calidad de vida a través del manejo de recursos naturales Evitar el ingreso de empresas petroleras y problemas con madereros y pescadores comerciales Incursionar en la crianza de peces y manejo forestal con fines maderables |
| C.N. Callería | Río Callería | Shipibo & Iskonawa | Miembros de la comunidad son dirigentes de FECONAU Comité de Manejo Forestal Comité de Pesca Comité de Artesanías Colaboración estrecha con otras comunidades nativas Alta participación comunal para la ejecución de obras públicas Centro poblado ordenado, residuos procesados | Uso sostenible de recursos de suelo y de monte para la elaboración de artesanías Tramitando la certificación forestal voluntaria Manejo de paiche | Controlar acceso al área Mantener su cultura y su lengua materna Mantener equidad de género: “Las mujeres también podemos ser guardaparques.” Dar mejor valor agregado a la madera |

Social assets that were identified during the social inventory of nine settlements near the Zona Reservada Sierra del Divisor from 2 to 22 August 2005. Compiled by A. Nogués.

**Fortalezas Sociales/
Social Assets**

| SOCIAL ASSETS | | | | | |
|----------------------------|--------------|--------------------|---|---|---|
| Community | Watershed | Ethnicity | Assets | | Vision for the future |
| | | | Organizational | Resource Use | |
| Comunidad Nativa San Mateo | Río Abujao | Asheninka | Communal work groups Rapid mobilization of community members to address threats | Subsistence use of variety of natural resources Titled lands sufficient for current local use Small-scale, low-impact wood extraction | Protect their resources from commercial timber and mining interests that threaten the area Maintain their culture and language Increase populations of medicinal and important fruiting plants |
| C.N. Patria Nueva | Río Callería | Shipibo | Local fishing watchgroup to protect river resources (COLOVIPE) Mothers Club Capacity to relate to and coordinate with external institutions Biohuerto Sanitation board Collaboration with neighboring communities Weekly communal work efforts | Reforestation with native species (<i>bolaina, caoba, cedro, sangre de grado, capirona</i>) Sustainable harvest of <i>aguaje</i> palms Sustainable use of local resources in women's arts and crafts Small-scale agricultural activities | Neighbor to a protected area Establish the first control post for the protected area Improve their quality of life through managing natural resources Avoid problems with commercial timber and mining interests; avoid incursions by petroleum companies Begin pisciculture and forest management activities |
| C.N. Callería | Río Callería | Shipibo & Iskonawa | Members of the community serve as leaders within FECONAU (Federación de Comunidades Nativas del Alto Ucayali) Forest management committee Fishing committee Artisan committee Collaboration with other native communities Communal work groups Organized and clean town | Sustainable use of local resources in arts and crafts Implementing voluntary forestry certification Managing <i>paiche</i> fish populations | Control access to the area Maintain their culture and language Maintain gender equality: "Women can be park guards, too." Get value-added benefits from timber |

**Fortalezas Sociales/
Social Assets**

| FORTALEZAS SOCIALES | | | | | |
|----------------------|--------------|----------|---|--|---|
| Comunidad | Cuenca | Etnia | Fortalezas | | Visión para el futuro |
| | | | Organizacionales | Uso de Recursos | |
| Caserío Vista Alegre | Río Callería | Mestizos | Solicitud en tramite para el ordenamiento de un permiso de aprovechamiento forestal maderable bajo modalidad de bosque local | — | Cuidar las aguas para el consumo humano con presencia de peces para autoconsumo |
| Caserío Guacamayo | Río Callería | Mestizos | Organización efectiva para la comercialización sostenible del irapai Buenas relaciones con concesionarios vecinos Hombres y mujeres trabajan juntos para juntar hojas y en la elaboración de techos Realizan trabajos comunales | Aprovechamiento sostenible de irapai para confección de techos Aprovechamiento de pona como insumo para los paños Producción agrícola y pecuaria de baja escala, para auto consumo; utilizan anzuelo para pescar | Apoyar la propuesta de un área protegida Participar en el cuidado y protección del área protegida |
| C.N. Limón Cocha | Río Tapiche | Kapanawa | Trabajo diario en mingas, organizado por las autoridades de la comunidad Club de Madres Club Deportivo, mediante el cual se fortalecen las relaciones con vecinos, incluyendo Buenas Lomas (Matsés) Presencia continua en la comunidad | Actividades productivas de baja escala para el autoconsumo | Participar en la protección del bosque Realizar reforestación Permanecer en el área, particularmente los jóvenes Mantener el idioma Kapanawa |
| Caserío Bellavista | Río Tapiche | Mestizos | Autoridades con alta capacidad de realizar gestiones con instituciones externas Ejecución de acciones conjuntas en base a una organización efectiva | Conocimiento profundo de su jurisdicción y de la cuenca alta del R. Tapiche Extracción artesanal de madera, que es selectiva y de bajo impacto; rechazo a la extracción con tractores; dejan árboles de diámetros menores al DMC Le dan valor agregado a la producción de la yuca; elaboración de farinha y tapioca de buena calidad | Permanecer en el lugar Evitar actividad de madera mecanizada Repoblar áreas intervenidas con maderas de especies de valor comercial |

| | | | Organizational | Resource Use | |
| Caserío Vista Alegre | Río Callería | Mestizos | Applied for permits to manage timber resources in their local forest | — | Protect water and fish resources for human consumption |
| Caserío Guacamayo | Río Callería | Mestizos | Effective organization to sustainably manage <i>irapay</i> palm commerce Collaboration with neighboring communities Men and women working together to build roofs Communal work groups | Sustainable harvest of <i>irapay</i> palms Sustainable harvest of <i>pona</i> palms Small-scale agriculture and fishing for local consumption; fishing with hook-and-line | Support the protected area proposal Participate in the protection and care of the protected area |
| C.N. Limón Cocha | Río Tapiche | Kapanawa | Daily communal work practices organized by local authorities Mothers Club Athletic organization that strengthens relationship with neighboring communities, including Buenas Lomas (Matsés) Continuous presence in community | Small-scale agricultural activities for local consumption | Participate in the protection of the forest Implement reforestation Remain in the area, particularly young people Maintain their culture and language |
| Caserío Bellavista | Río Tapiche | Mestizos | Capacity to relate to and coordinate with external institutions Well-organized communal activities | Profound knowledge of their jurisdiction in the Río Tapiche watershed Selective low-impact harvest of artisanal woods; no extraction using tractors, and leave trees that are smaller than minimum cutting limits Manioc production with value-added products such as <i>farinha</i> and high quality tapioca | Remain in the area Avoid mechanized timber extraction Reforest disturbed areas with commercial timber species |

**Fortalezas Sociales/
